

Powering the Safety Revolution.™

Industrial Rescue Services

Safer operations, agile emergency response.

- Proven best practices and proactiveness that improve emergency response
- Early planning of rescue activities and engagement with onsite personnel
- Best-in-class rescue, breathing air and gas detection equipment
- Highly-trained technicians with Oil and Gas experience
- Efficient and safe Oil and Gas projects

A Vital Part of Your Projects

When executing critical activities your safety demand increases. Your in-house rescue team may need support to carefully plan and ensure work is done safely and emergencies are properly dealt with. United Safety Industrial Rescue Services cover Confined Space and High Angle rescue operations and encompass equipment, personnel and processes necessary to perform rescue and emergency response in industrial environments in a safe and timely manner.

Best Practices and early planning for Safer Operations

Our Industrial Rescue services follow a two-pronged strategy. On one hand, we work in accident prevention, by improving efficiency and implementing preventive measures through ongoing monitoring of work sites. On the other hand, we provide agile response in the event of an incident through a carefully-crafted rescue plan that is executed with excellence.

- Our Emergency Response Team participates in the project planning process.
- Each work location is thoroughly evaluated, and individual rescue plans are developed with details on work site layout and rescue procedure. If technically demanding, the rescue could be practiced beforehand.
- Once the project starts, United Safety rescue professionals will evaluate changing conditions to adjust the plan if required. They will also make sure all team members are familiar with available anchors, tie off points and drop zones.
- The familiarity with your installations, rescue procedure and the team involved allows our Industrial Rescue Technicians to respond swiftly to any emergency.

Highly Qualified Personnel

- **Rescue Managers:** With years of field experience in industrial settings, our rescue managers can help you with proactive planning, customer support and site leadership. They are trained to identify safer and more efficient ways of executing critical activities.
- **Emergency Response Team (ERT):** Our skilled technicians help establish preventive measures and are able to respond faster in emergencies due to their knowledge of site and procedures. They are trained to handle both confined space and high angle rescue and meet highly-respected standards, such as OSHA and NFPA.
- **Safety Watch:** Our safety watch personnel understand the importance of following site safety measures. They are cross-trained in bottle watch, spark and fire watch, confined space watch, area watch, respiratory protection and gas testing.

Reliable Equipment

United Safety provides specialized confined-space and high-angle rescue equipment, comprehensive breathing air and gas detection systems to ensure the safety of your operations.
