Provided Well Control Incident Investigation to an existing customer to prevent the incident from recurring and improve HSE performance.

Conducted Root Cause Analysis of a Level 4 Well Control Incident and helped the customer manage the corrective actions to ensure improvement in drilling actions.

Challenge

Help the customer understand the root causes of a well control incident and instill the importance of monitoring and improving HSE performance

Solution

Provided a complete root cause analysis report including recommendations and technical support relating to local and regional HSE procedures

Results

The customer was able to complete their incident investigation on time and gained management support to implement corrective and preventive actions

United Safety was tasked to conduct an investigation of a well control incident in a timely manner and support our customer`s goal of continuous improvement in HSE performance. Understanding the causes of unplanned events is essential for ensuring that appropriate corrective and preventive actions are implemented to improve the systems, work practices, and working environment. The customer needed technical support to manage incidents and comply with local and regional incident reporting procedures.

Spain

KEY CUSTOMER BENEFITS

Completed root cause analysis with clearly outlined recommendations for corrective actions

The company developed a hypothesis of the event based on a keen observation of facts. Probable failure scenarios were developed to validate the hypothesis and ensure customers had a clear understanding of what went wrong and inform them of appropriate corrective actions.

Reviewed contractor and subcontractor involvement to avoid gaps in the safety practices of all personnels

A thorough review of contractor and sub-contractor involvement was also conducted. The report identified gaps in methods, systems, standards and procedures and recommended preventive actions necessary to improve work practices and minimize the possibility of the incident recurring.

Provided technical support at management level to improve HSE procedures

Since the investigation was carried out by a qualified, objective and independent third party, the customer was able to accept accountability and completed their incident investigation in a timely, efficient and effective manner. United Safety ensured that corrective actions were endorsed by management including the constant monitoring and improvement of HSE performance.
