

Safety and Productivity. Delivered.

Typhoon™ Trailer

**When you sound the alarm, they will hear it.
Guaranteed.**

Typhoon™ Trailer

Depending on the kind of activities being performed, worksites can get extremely noisy. This is especially dangerous when workers in a high-risk environment like a fracking site may not be able to hear an alarm when it is sounded. This issue is resolved with the Typhoon™ Trailer. Equipped with a locomotive train horn, the Typhoon™ Trailer is a mobile emergency alarm that is so loud, that both day and night shift personnel will be alerted to evacuate to safety.

The Typhoon™ Trailer. An alarm you can depend on.

www.unitedsafety.net

You want their attention? You got it.

The Typhoon™ Trailer is designed with one purpose. To get your workers' attention. Equipped with a locomotive train horn, four strobe lights in four different colours and an 18 feet high rotating telescopic mast, you can be assured that when you sound the alarm, every single person on the work site will hear it.

Key features of the Typhoon™ Trailer include:

- 18 feet high telescopic mast
- Locomotive train horn attached to top of Mast
- Mast Rotates 360 degrees to point horns to work area
- 4 strobe lights in 4 different colors - red, blue, amber & white
- All military grade connections
- 12 VDC current system
- Solar capable solution for remote locations
- All ½" quick connections for more air volume delivery
- 4 X 500 cubic foot cylinders for longer alarm times

Key benefits of the Typhoon™ Trailer include:

- Quick and easy rig up; the Typhoon™ Trailer can be set up in just 30 minutes with minimum tools
- Minimal footprint on location
- Solar rechargeable
- Impossible to miss the alert
